

Project – 20 points

```
<html>
  <head>
    <script language="Javascript">
      function your_function_name ()
      { // to access a variable in a html form,
        // window.document.forms[0].uplow.value }
      </script>
    </head>
    <body>
      ...
    </body>
</html>
```

How to change lower/UPPER button's value? If the button's name is uplow.

```
<input type = "button" value="lower" name="uplow" onClick="your_function_name();">
```

How to convert the letter case in a text box? If the text box' name is 'question'.

- 1> Click at the top three buttons need to link to proper website
- 2> Add a new button (uplow) to your existing form, save as up-low.html
- 3> Write a program to change the value display on a button, and the text in the text_box will be changed accordingly
- 4> When you reload the page, it should change back to "Sentence Case"
- 5> Center everything
- 6> Change tab title as "UPPER-lower"
- 7> Add a reset (clear) button to clear the form
- 8> ALSO, make sure the page (including form) will be automatically reset when the page is refreshed
- 9> The sample as below:

Initial sentence case value in text_box and the button:

HTML Color HTML Intro HTML Ascii Art

Question 1: Where will the URL be displayed?

UPPER

☒ Title bar
☐ Directories
☐ Menu bar
☐ Location bar

Clear

When a user clicks the UPPER button, the text changes to ALL upper case, and the button changes to “lower”:
